

Project ID: PW22DS03

Project Title: Forecasting future trending topics using text data.

Team Members:

Mohammed Zeeshan (PES1201801814),

Kavishankar K S (PES1201802001),

Rohan M (PES1201801798)

Project Guide: Prof. Dinesh Singh

Project Abstract:

Youtube, Google, and Twitter are often figures among the top 3 most popular application on website.

It has been reported YouTube users upload 72 hour videos / min.

So, forecasting content popularity is of great support and drive for design and management of various services.

Our project is towards building ML model to forecast popular online content, using various techniques.

For this project we use past trending topic to train ML models for prediction future trending.

Forecasting the future trending topics by using the current and past trend data from social media sites like twitter, YouTube and with the help of google trends.
